CAREER OBJECTIVE

Third-year B.Tech CSE (AI & ML) student who learns by building. I have designed and shipped full-stack web, mobile, and AI-integrated projects using Python, Flask, React Native, and Firebase, and I am comfortable working across the stack and on Linux tooling. Seeking a software development / backend internship where I can contribute to real products while sharpening my engineering skills.

EDUCATION

Degree / Examination	Institute	University / Board	Year	Score
B.Tech – CSE (AI & ML)	Avantika University	Avantika University	2024 – 2028	Pursuing
Senior Secondary (XII)	Ideal Public School	CBSE	2024	82%
Secondary (X)	Ideal Public School	CBSE	2022	79%

- Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Machine Learning, Probability & Statistics

TECHNICAL SKILLS

Languages: Python, JavaScript, Kotlin, SQL, HTML, CSS
Backend & APIs: Flask, Flask-SocketIO, Django (learning), REST API integration, BeautifulSoup (web scraping)
Frontend & Mobile: React, React Native, Expo, Bootstrap
Databases & Cloud: SQL, SQLite, Firebase (Auth, Firestore), Render (deployment)
AI / GenAI: Google Gemini API integration, LLM app basics, prompt design
Developer Tooling: Git & GitHub, Linux, NixOS, Shell scripting, Neovim, tmux, VS Code
Currently Learning: Docker, PostgreSQL, Django REST Framework

ACADEMIC PROJECTS

TicketBookApp – Movie Booking Mobile App | *React Native, Expo, Firebase, Google Gemini, TMDB API* [GitHub ↗](#)

- Built a cross-platform mobile app to browse films via the TMDB API, then select city, date, showtime, and seats and generate a QR-style digital ticket.
- Implemented email/password authentication and live seat availability using Firebase Auth and Firestore real-time transactions.
- Added a natural-language movie recommendation feature powered by the Google Gemini API, enriched with posters, ratings, and IMDb links.
- Organized the app into browse, booking, community forum, and streaming sections on top of a TMDB-powered catalogue.

Liar Game – Real-Time Multiplayer Web Game | *Python, Flask, Flask-SocketIO, JavaScript* [GitHub ↗](#)

- Built a real-time multiplayer social-deduction game with room creation, join-by-code, and live game state synchronized across players over WebSockets (Socket.IO).
- Implemented the full round lifecycle on the server: random role and secret-word assignment, turn-ordered clue submission, voting, reveal, and scoring.
- Handled player join, reconnect, and disconnect states so room membership and scores stayed consistent when players dropped mid-game.
- Deployed to Render using Gunicorn with an Eventlet worker for long-lived connections, and wrote a smoke test covering the full three-player flow.

Movie Ticket Booking – Android App + Web-Scraped Data | *Kotlin, Python, Flask, BeautifulSoup* [GitHub ↗](#)

- Developed an Android movie-ticket booking app in Kotlin backed by a Python Flask API.
- Used BeautifulSoup to scrape live movie and showtime data from the web and serve it to the app through the backend.

Web Recommendation System | *Python, Flask, HTML, CSS* [GitHub ↗](#)

- Built a web-based recommendation application with a Python/Flask backend and an HTML/CSS interface that suggests results based on user input.

Catch The Book – 2D Arcade Game | *Python, Pygame* [GitHub ↗](#)

- Created a 2D arcade game with Pygame using a real-time game loop and W/S keyboard controls for player movement.

TRAININGS & CERTIFICATIONS

- **Introduction to Back-End Development** – Meta (Coursera), 2026
- **Introduction to Software Engineering** – IBM (Coursera), 2025
- **Generative AI: Introduction and Applications** – IBM (Coursera), 2025
- **Programming for Everybody (Python)** – University of Michigan (Coursera), 2025
- **Introduction to Front-End Development** – Meta (Coursera), 2025
- **The Data Science Profession** – University of London (Coursera), 2026
